If no danger sign, TREAT at home and ADVISE on home care:

- **If Diarrhoea** (less than 14 days AND no blood in stool)
  - Give ORS. Help caregiver give child ORS solution in front of you until child is not longer thirsty.
  - Give caregiver 2 ORS packets to take home. Advise to give as much as child wants, but at least ½ cup ORS solution after each loose stool.
  - Give zinc supplement. Give 1 dose daily for 10 days:
    - Age 2 months up to 6 months - ½ tablet (total 5 tabs)
    - Age 6 months up to 5 years – 1 tablet (total 10 tabs)
      Help caregiver to give first dose now.

- **If Fever** (Less than 7 days) in a malaria area
  - Do a rapid diagnostic test (RDT)
    - If RDT is positive, give oral antimalarial
      - AS + AQ (Artesunate + Amodiaquine) once per day for 3 days
        - Age 2 months to 11 months tablet (25mg Artesunate/67.5mg Amodiaquine) total 3 tabs
        - Age 1 to 5 years 1 tablet (50mg Artesunate/135mg Amodiaquine) total 3 tabs
      - Or AL (Artemether-Lumefantrine).
        - Age 2 months up to 3 years – 1 tablet (total 6 tabs)
        - Age 3 years up to 5 years – 2 tablets (total 12 tabs)
      Help caregiver give first dose now, and 2nd dose after 8 hours. Then give dose twice daily for 2 more days.
  - Advise caregiver on use of bed net (ITN).

- **If Fast breathing**
  - Give oral antibiotic
    - COTRIMOXAZOLE 80/400. Give two times daily for 5 days
    - Age 2 months up to 12 months ½ tablet (5 tabs)
    - Age 12 months up to 5 years 1 tablet (10 tabs)
  Or AMOXYCILLIN tablet – 250mg. Give twice daily for 5 days:
    - Age 2 months up to 12 months - ¾ tablet (total 7½ tabs)
    - Age 12 months up to 5 years – 1½ tablets (total 15 tabs)
  Help caregiver give first dose now.

For ALL children treated at home, advise on home care

- Advise caregiver to give more fluids and continue feeding.
  - Advise on when to return. Return immediately if child
    - Cannot drink or feed
    - Becomes sicker
    - Has blood in the stool
  - FOLLOW UP child in 3 days (schedule appointment.)
